Preface and dedicatory remarks ix

A biographical sketch of Professor Ryukiti R. Hasiguti . xi

Section 1. Fundamental Properties of Defects

Present knowledge of point defects in pure metals, *J. Koehler* 3
Relationship between c/a ratio and point defect properties in hcp metals, *D.J. Oh and R.A. Johnson* 5
TDPAC study of lattice defects and solutes in cadmium and cadmium alloys, *R. Hanada* 9
Point defects in superconductors, *Y. Quéré and F. Rul - lier-Albenque* 19
Normal modes of dislocations and rate theory, *R.D. Isaac and A.V. Granato* 24

Section 2. Radiaton Damage

The anisotropy and temperature dependence of the threshold for radiation damage in gold – Comparison with other fcc metals , *M. Hohenstein, A. Seeger and W. Sigle* 33
Stochastic modeling of cascade damage – Collisional processes, *K. Kitajima* 47
Calculations of collision cascades in oxide ceramics MgO and α-Al_2O_3, *E. Iguchi, K. Otake, T. Yamamoto and H. Nishikawa* 55
Electron irradiation hardening of magnesium and zinc single crystals at 4.2 K, *T. Mifune, A. Urakami, A. Sato and M. Meshii* 64
Vacancy clustering in electron-irradiated FeNiCr austenitic alloys, *D. Huguenin, P. Moser and F. Vanoni* 73
Radiation effects on compound formation in palladium-implanted silicon using a focused ion beam machine, *S. Balakrishnan, K. Rajan and J.C. Corelli* 79

Section 3. Microstructaral Evolution and Phase Stability During Irradiation

Radiation rate dependence of microstructure evolution, *M. Kiritani* 89
Formation and stability of radiation-induced phases in neutron-irradiated austenitic and ferritic steels, *P.J. Maziasz* 95
Irradiation-induced spinodal decomposition in alloys, *K. Nakai and C. Kinoshita* 116
Radiation-enhanced formation rate of Guinier–Preston zones in proton-irradiated Cu–12.4 at% Be, *B. Kell and H. Wollenberger* 126
Radiation-induced segregation and precipitation in Al–Zn alloys, *T. Ezawa and F.E. Fujita* 131

Section 4. Effect of Hydrogen, Helium and Other Rare Gases on Microstructure

Hydrogen implantation effects in the subsurface layer of aluminum – Bubble pressure and surface modifications, *K. Kamada* 141
Effect of hydrogen on the microstructure, mechanical properties and phase transformations in austenitic steels, *Y.Y. Li and Z.S. Xing* 151
Evolution of krypton precipitates in Kr-implanted aluminium, *E. Yagi, I. Hashimoto and H. Yamaguchi* 158
A study of helium trapping, bubble structures and helium migration in Type 316L stainless steel under helium implantation, *P. Wang, Y. Li, J. Liu, G. Zhang, R. Ma, P. Zhu, C. Qiu and T. Xu* 167

Section 5. Effect of Hydrogen and Helium on Mechanical Properties

Embrittlement of materials: Si(H) as a model system, *J.W. Corbett, P. Deák, C. Ortiz-Rodriguez and L.C. Snyder* 179
Influence of 100 keV helium irradiation on tensile properties of pure iron and JFMS steel at low temperatures, *Y. Nakamura, S. Kitajima and K. Shinohara* .. 185
Helium embrittlement in Fe–Ni–Cr austenitic alloys and ferritic MA 956 alloy, *H. Shiraishi, N. Yamamoto and A. Hasegawa* 198

Section 6. Mechanical Properties and Fusion Structural Materials

Phenomenological theories on irradiation effects of steels, *N. Igata* 209
Fracture behaviors of neutron-irradiated ferritic steels studied by the instrumented Charpy impact test, *H. Yoshida, K. Miyata, M. Narui and H. Kayano* 217
Fracture toughness evaluation of fusion reactor structural steels at low temperatures by small punch tests, *T. Misawa, S. Nagata, N. Aoki, J. Ishizaka and Y. Hamaguchi* 225

Lifetime of Manet steel in load-cycling tests in vacuum at 20 and 550 °C, *H. Ullmaier and W. Schmitz* 233
Radiation damage of HFIR-irradiated candidate stainless steels for fusion applications, *A. Hishinuma and S. Jitsukawa* 241
On the development of low-activation materials for fusion reactors, *M. Okada, T. Noda and F. Abe* 249
Phase stability and high-temperature strengths of high manganese–chromium–iron base alloys as reduced radio-activation materials, *Y. Hosoi, Y. Okazaki, N. Wade and K. Miyahara* 257
Cryogenic properties of new austenitic stainless steel for fusion reactor superconducting magnets, *K. Nohara, M. Shimotomai and Y. Habu* 264
Joining of silicon carbide, *S. Morozumi* 270

Section 7. Physical Properties

Amplitude internal friction peaks associated with the interaction between dislocation kinks and solute atoms in aluminium , *T.S. Kê* 275
Diffusion of chromium in nickel-base Ni–Cr–Fe alloys, *T.-F. Chen, Y. Iijima, K.-i. Hirano and K. Yamauchi* 285
High-temperature deformation mechanism in sub-stoichiometric titanium carbide – Correlation with carbon vacancy ordering, *S. Tsurekawa, H. Kurishita and H. Yoshinaga* 291
XPS study on the electronic structure of hydrided Ti–V, Ti–Nb and Ti–Mo alloys, *K. Tanaka and H. Aoki* . 299
Irradiation effects in $Ba_2YCu_3O_7$ superconductor, *K. Shiraishi* 305

Section 8. Fuels and Materials for the Fuel Cycle

Achievement of world's best performance in Japanese LWR, through the successful development on fuels and materials, *Y. Mishima* 317
Electrical conductivity and defect structure of $(U, Pu)O_{2+x}$, *K. Naito, T. Tsuji, T. Fujino and T. Yamashita* 329
A model for radial cesium transport in a fuel pellet, *S. Imoto* 336
Structure and thermal stability of iron-silicate nuclear waste glasses, *R. De Batist, P. Van Iseghem, E. De Grave and A.D. Stalios* 342
